

For HPV-positive head and neck cancer surveillance

Your Blood TTMV® Score Can Guide the Way

An innovative blood test is helping physicians personalize HPV-positive head and neck cancer surveillance

NavDx[®] testing can significantly improve your treatment plan

Routine NavDx testing to track changes in your TTMV® Score offers your physician a more complete picture of your cancer status than imaging scans alone. With a simple blood draw the NavDx test can detect whether human papillomavirus (HPV) positive cancer is present anywhere in your body, helping your physician create the best care plan for you.

To optimize your care, your physician relies on NavDx to:

- Help rule out recurrence and provide peace of mind during your ongoing post-treatment surveillance
- Assist in accurate detection of cancer recurrence before symptoms appear, because knowing sooner may improve your ability to fight the disease

Monitoring your blood TTMV Score with the NavDx test will help your physician assess your response to treatment and detect if your cancer returns, even before symptoms appear.

Your blood has never been more important

What is a blood TTMV[®] Score?

TTMV-HPV DNA, or tumor tissue modified viral-HPV DNA, is a tumor biomarker that is specific for HPV-positive cancers. A blood TTMV Score is the unique result for a NavDx test, which quantifies circulating TTMV-HPV DNA fragments in your blood. Tracking changes in your TTMV Score gives your physician important information about your HPV-positive cancer status.

TTMV-HPV DNA fragments in blood

Why did my physician order a NavDx[®] test?

Your physician ordered a NavDx test because there is no better way to measure your blood TTMV Score. Using the NavDx test to track your TTMV Score and detect if cancer is still in your body can guide the way to personalizing your cancer care.

What is a biomarker?

A biomarker is molecule that can be objectively measured in a laboratory test to give your physician more information about your cancer status.

Routinely test with the NavDx blood test to be assured of your TTMV Score and cancer status.

Routine NavDx testing assists in earlier detection of recurrent disease

AFTER TREATMENT:

Can a NavDx test show if my cancer has returned, even if I do not have symptoms and my imaging is clear? Published studies show that **NavDx testing accurately and reliably predicted** when cancer returned.

Among post-treatment patients:

298% of people whose TTMV score remained negative had no cancer recurrence

° | ≥95% °

of people with one positive TTMV score had recurrence

Routine monitoring with NavDx **can help detect cancer recurrence a median of 4 months earlier** than imaging biopsies, or symptoms.

Is a NavDx test required before starting treatment? No, NavDx testing can be used to detect recurrence without having a baseline TTMV Score. Pretreatment testing is only recommended for newly diagnosed patients.

Can NavDx testing show if my cancer is responding to treatment? Yes, tracking changes in your TTMV Score help to assess your response to treatment.

Discuss all your TTMV Scores with your physician to stay informed of your true cancer status.

FAQs

What will my physician learn from the NavDx[®] blood test results?

Your NavDx test results will provide important information about your cancer status that you can't get from any other source. Your physician will use the NavDx test to reliably measure and monitor changes in your blood TTMV Score during your care. Since NavDx testing is highly accurate, you can be assured your physician will have reliable information to effectively manage your disease.

How often should I be tested?

When and how often your blood TTMV Score is tested is up to you and your physician.

Before treatment

During treatment

After treatment (monitoring for cancer recurrence):

 ≤2 years post treatment: every 3 months

 3-5 years post treatment: every 6 months

 6+ years post treatment: 1 time per year

Set up a NavDx testing schedule that's right for you.

Is financial assistance available?

Naveris is committed to ensuring the NavDx test is accessible for patients by providing support services and financial assistance to those who qualify. If you have questions regarding eligibility, please email a Naveris Billing Team Member at billing@naveris.com or call (833) 628-3747.

If I have more questions, where do I go?

We're here to help. Email <u>support@naveris.com</u> or call Client Services at (833) 628-3747 with any questions you may have.
